

TORSO TARGET BRACKET KIT (#TTBK)

www.rswindustries.com

Thank you for purchasing our all steel, made in America target products. These two brackets quickly and easily attach to the top threaded portion of the existing hooks used to hang the targets. You can then use 1" x 2" x 6 or 8 foot long furring strips and secure them into the brackets using the provided thumb screws.

Remove the top nuts and flat washers from each of the threaded hooks used to hang the targets. Unscrew the bottom nuts on each to allow an additional ¼" of thread to stick up through the bracket plate welded to the stand. With the angle of the plate welded to the tube of the Torso Target Bracket angling upward, place the bracket onto the threaded portion of the hooks. The threaded portion of the hooks will now be sticking through the Torso Target Bracket plate. Replace the flat washers and nuts and securely tighten. While tightening make sure the "hook" is facing forward as provided from the factory. Insert furring strips through each tube making sure that they are tight against the ground, and are parallel with one another and then tighten thumb screws to secure furring strips.

CONSUMER PRODUCT WARNING: RSW assumes no responsibility for the use or misuse of this product. "You" are responsible for the safe use of these target products. Assure you are shooting at a safe distance, in an access restricted area which will protect you, others, animals and property from ricocheting rounds. This caution cannot cover all possible conditions and situations that may occur. It is understood by the user that common sense and appropriate cautions are factors that cannot be built into these products and can only be exercised by the user.
